ABSTRACT
The use of narcotics and illegal drugs (narcotics) among teenagers is considered to be caused by several things, including because Indonesia is located between three continents and considering the development of science and technology, the influence of globalization, very advanced transportation flows and rapid technological developments. very sophisticated as a target dynamic for illicit drug trafficking. Drug abuse and illicit trafficking is an increasingly widespread, complex and complicated problem faced by the Indonesian people recently, because it can cause various negative impacts, especially among the younger generation, such as health problems, social and economic problems, and also politics. Drugs have a very broad negative impact both physically, psychologically, economically, socially, culturally, on defense and security, and others. Those who use drugs will feel dependent after continuous use. The drug problem in Indonesia is still something that is urgent and complex. In the last decade this problem has become widespread. This is proven by the significant increase in the number of drug abusers or addicts, along with the increasing disclosure of drug crime cases with increasingly diverse patterns and increasingly massive syndicate networks. The impact of drug abuse not only threatens the survival and future of the abuser, but also the future of the nation and state, regardless of social, economic strata, age or level of education. Various efforts to overcome the growth of drug addicts have been made, but have been hampered by weak laws.

Keywords: Socialization, Drugs, Crime, Teenagers

INTRODUCTION

The demand to create quality and superior human resources is increasingly high in the face of the progress of the current era of globalization. To realize this condition, strategic steps are needed, consistent, sustainable and carried out continuously in real human life so that a quality and superior generation is created. However, in reality, drug cases are starting to increase targeting school children, especially students in junior high schools. Drugs are used as a lifestyle.

The use of narcotics and illegal drugs (narcotics) among teenagers is considered to be caused by several things, including because Indonesia is located between three continents and considering the development of science and technology, the influence of globalization, very advanced transportation flows and rapid technological developments. very sophisticated as a target dynamic for illicit drug trafficking. These concerns are concerning. Based on data from the National Narcotics Agency (BNN), 2.2% of the total population of people in Indonesia is involved in drugs. This is

based on the results of the latest research by BNN and the University of Indonesia (UI). The problem of drug abuse in Indonesia is very worrying. This is increasingly sharpened due to the rampant illicit trafficking of narcotics which has spread to all levels of society, including among the younger generation. This will greatly influence the life of the nation and state in the future.

Drug abuse and illicit trafficking is an increasingly widespread, complex and complicated problem faced by the Indonesian people recently, because it can cause various negative impacts, especially among the younger generation, such as health problems, social and economic problems, and also politics. Of the 3.2 million victims of drug abuse in Indonesia, around 1.1 million of them are students. Meanwhile, research results from the National Narcotics Agency show that 3.9 percent of the 40 people who die every day due to drug overdoses are students. From the results of these two studies, it can be interpreted that the main targets of drug abuse in Indonesia are generally students. Even more ironic, among doctors there are also victims of drug abuse (Indonesian AIDS Community, 2011). This number was further emphasized by Hawari who stated that the phenomenon of drug abuse was like an iceberg phenomenon. The actual figure represents ten times the amount of abuse found. According to Ali, from 2010 to 2011 there has been an increase in drug cases in Indonesia, namely from 26,000 cases to 29,000 cases with a total of 5 million victims. The increasing number of drug abusers from year to year certainly cannot be considered a trivial problem, but on the contrary, this could become a major problem for the nation, because some of the victims of drug abuse are the nation's next generation.

Drugs have a very broad negative impact both physically, psychologically, economically, socially, culturally, on defense and security, and others. Those who use drugs will feel dependent after continuous use. A drug user will not live a normal life like other members of society, they usually have strange behavior and create physical and psychological dependence at different levels. Addiction means they cannot live without using drugs. If it is not properly anticipated, the dangers of drug abuse as explained above will damage this nation and state. Therefore, good cooperation is needed from all components of the nation to overcome drug abuse.

The drug problem in Indonesia is still something that is urgent and complex. In the last decade this problem has become widespread. This is proven by the significant increase in the number of drug abusers or addicts, along with the increasing disclosure of drug crime cases with increasingly diverse patterns and increasingly massive syndicate networks. The impact of drug abuse not only threatens the survival and future of the abuser, but also the future of the nation and state, regardless of social, economic strata, age or level of education. Various efforts to overcome the growth of drug addicts have been made, but have been hampered by weak laws.

METHODS

Implementation steps taken by the PKM team to offer solutions in overcoming several problems faced by the National Narcotics Agency of Pelalawan Regency when carrying out socialization activities on the Dangers of Drugs to High School Students as an Effort to create BESINAR (Free From Drugs) youth in Pelalawan Regency, and preparing to make teenagers agents of change in the war on drugs. The authors categorize these steps into:

1. Carrying out observations through communication with employees of the National Narcotics Agency of Pelalawan Regency by the head of the proposer and members to find out the problems with teenagers who have problems with drugs and the best program efforts to prepare.
2. Meeting with the chairman, proposing members and partners to determine plans, division of tasks betweenteam, solutions offered by the proposing team and partners, as well as the PKM activity schedule.
3. Carrying out outreach regarding efforts to understand children and teenagers carried out by the chairman and membersa proposing team that is competent and able to provide assistance to students, especially those selected to become volunteer agents of change in the main effort of the war on drugs.

4. Carry out ongoing assistance after the implementation of PKM for both partners, namely the Pelalawan Regency National Narcotics Agency and students, especially those selected to become volunteer agents of change in the main effort of the war on drugs.
5. Monitoring and evaluating by the chairman and all team members regarding the results of PKM activities, to see whether or not the solutions provided to partners are appropriate.
6. Hold a meeting of all members of the proposing team regarding the results of the evaluation of PKM activities.
7. Make reports on the results of PKM implementation in the form of output, namely online news and articles with ISSN.

Partners participate in this activity by taking part in planning meetings, when determining solutions to problems and during the implementation of activities. Then partners also participate in monitoring the evaluation of the results of PKM activities, whether the activities have gone according to plan and ensuring that the solutions offered will answer or solve the problem.

Evaluation of the implementation of PKM activities is carried out by assessing the suitability of the achievement of indicators that have been determined when planning PKM activities and have been approved by the selected partners. The duties and roles of members are very important to see the suitability of the skills and expertise for the tasks that have been given, namely:

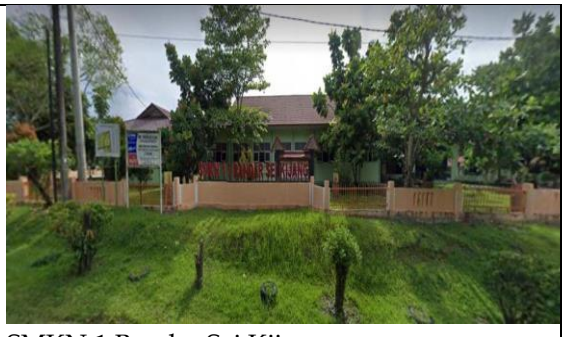

1. The chairman of the proposer is tasked with drafting PKM proposals, making direct observations with partners, establishing direct communication with partners, leading the implementation of PKM activities and is responsible for preparing reports on the results of PKM activities.
2. Proposing members are tasked with assisting the chairman in making observations of partners, assisting with the technical implementation of PKM in the field, coordinating the implementation of PKM in general, being responsible for the administrative management of PKM activities and assisting in the preparation of PKM results reports.
3. Students are tasked with being field assistants in terms of carrying out counseling or providing assistance to partners as well as in terms of procuring goods needed to resolve partner problems.

Location of service

The location of the National Narcotics Agency partner in Pelalawan district is located at Jalan Tengku Said Abdul Rahman No. 7 Pangkalan Kerinci Barat, Pangkalan Kerinci, Pangkalan Kerinci Barat, Pelalawan, Pelalawan Regency, Riau 28381. Meanwhile, the location for the implementation of community service is carried out at SMKN 1 Bandar SEI KIJANG Jalan Lintas Timur KM.39 Simpang Langgam, Lubuk Ogung Village, Bandar Sei Kijang District, Regency Pelalawan.

RESULTS

Based on the problems that exist with these partners, the results of this activity are as follows:

1. Lack of awareness among teenagers about the dangers of drugs

For this problem, the proponent provides education about the dangers of drugs and efforts to prevent them. This activity will later be filled by the Chairman of the Proposer along with Proposing Members and partners who will also provide direction and education according to their respective fields of expertise. The expected output will be an activity video and the addition of a reference pocket book containing the dangers of drugs and efforts to prevent them. So apart from following the socialization, they were also provided with a pocket book.

2. Forming student characters who are ready to become agents of change in the war on drugs.

For this problem, the proponent of training is about forming the character of an agent of change for students. This activity will later be filled by the Chairman of the Proposer as well as members and partners according to their field, namely knowledge in the field of narcotics crime in accordance with the required field of knowledge. The expected output will be articles published in journals with ISSN and increasing their abilities regarding the dangers of drugs and efforts to prevent them.

Science and Technology (Science, Technology and Arts) It is hoped that both science, technology and arts can be applied in the context of strengthening teenagers in Pelalawan Regency, in this case strengthening in facing the dangers of drugs through Community Service Partner activity programs, namely the Pelalawan Regency National Narcotics Agency. So this service is expected to produce science and technology in the form of:

a. Make teenagers aware of good prevention strategies against danger drugs in society, so that they are ready for all forms of crime patterns growing concern about drugs in society.
b. Having knowledge of prevention efforts for children and adolescents does not fall into it drug danger black pattern.
c. Work integration facilities for partners and academic groups through dedication to achieve results

The programs implemented can help each other optimally. Have the knowledge to encourage community participation at every stage planning and implementing development, improving quality and capacity human resources, ensuring crime prevention policies and programs effectively sustainable manner in accordance with existing priorities, potential and local wisdom.

With science and technology distributed to partners of the Pelalawan Regency National Narcotics Agency, it will certainly have a positive impact on institutional quality. The knowledge transferred to partners and the community is of course in accordance with the field of knowledge possessed by the proposing team, namely criminology which is related to crime prevention patterns, especially drug crimes, so that it can produce work programs that are in accordance with scientific principles (theory) and practice in the field. .

The overall implementation of service activities can be seen based on the following components:

a. Achievement of service objectives. During the implementation of service from the target of 20 community participants/adolescents, there were 6 participants who did not really understand the dangers posed by the dangers of drugs. This occurred due to the lack of socialization in the form of education to adolescents about the dangers posed by drugs.
b. Achievement of planned material targets. Achievement of planned material targets in this service activity can be assessed as good (80%). All material that has been planned can be delivered to participants, although due to time constraints there is material that is only presented in outline.
c. Participants' abilities in mastering the material. Participants' abilities seen from their mastery of the material can be assessed as good (80%). This can be seen from the enthusiasm of the participants in participating in socialization activities to the enthusiasm of the participants in

asking several questions. Overall, service activities for the community/youth in Lubuk Ogung village, Bandar Sei Kijang subdistrict, Pelalawan Regency, measured from the three components above, can be considered quite good. This is thanks to the support of many parties, especially partners, namely the Pelalawan BNNK as well as the village head and the SMKN 1 Bandar Sei Kijang school.

CONCLUSION

The increasing number of drug abusers from year to year certainly cannot be considered a trivial problem, but on the contrary, this could become a major problem for the nation, because some of the victims of drug abuse are the nation's next generation. Drugs have a very broad negative impact both physically, psychologically, economically, socially, culturally, on defense and security, and others. Therefore, good cooperation is needed from all components of the nation to overcome drug abuse. Based on the problems existing with these partners, the results of this activity are as follows. Lack of awareness among teenagers about the dangers of drugs. For this problem, the proposer provides education about the dangers of drugs and efforts to prevent them.

This activity will later be filled by the Chairman of the Proposer along with Proposing Members and partners who will also provide direction and education according to their respective fields of expertise. The expected output will be an activity video and the addition of a reference pocket book containing the dangers of drugs and efforts to prevent them. So apart from following the socialization, they were also provided with a pocket book. Forming the character of students who are ready to become agents of change in the fight against drugs, war on drugs. This activity will later be filled by the Chairman of the Proposer as well as members and partners who are in accordance with their field, namely knowledge in the field of narcotics crime in accordance with the required field of knowledge. The expected output will be articles published in journals with ISSN and increasing their abilities regarding the dangers of drugs and efforts to prevent them.

Science, Technology and Arts Science, Technology and Arts It is hoped that science, technology and arts can be applied in the context of strengthening teenagers in Pelalawan Regency, in this case strengthening in facing the dangers of drugs through Community Service Partner activity programs, namely the Pelalawan Regency National Narcotics Agency. Having knowledge of preventive measures for children and teenagers from falling into the trap of achieving planned material targets. Achieving planned material targets for this service activity can be assessed as good 80. Overall,

community service activities for youth in Lubuk Ogung village, Bandar Sei Kijang sub-district, Pelalawan Regency are measured of the three components above can be assessed as quite good.
